

Eric's Technical Notes

A collection of my technical notes and daily learning posts.

I use this repository as part of my learning process to record concepts, organize ideas, review course materials, and document what I learn in computer science.

The goal of this repository is not only to keep notes, but also to explain topics in my own words so that I can better understand and remember them.

Currently Included

- OSU
 - CSE 2331: Foundations II
 - Probabilistic Analysis & Quick Sort

More topics and courses will be added as I continue learning.

Purpose

This repository is mainly used for:

- Daily learning posts
- Course notes
- Algorithm explanations
- Programming concepts
- Study reviews
- Personal technical summaries

These notes are written primarily for my own learning and review, but I also hope they can be useful to others who are studying similar topics.
